So let me teach you something...

It is non-conceptual, but the (2nd arm) *of a spin-fulcrum* [let spin not be necessary here] - relates to the *1st*,... that 'the acceleration (directed along the line of motion)' - is such-that when we take *it* (momentum) at-perperndicular; the velocity engages of a shift in it's duration-of-time. That when* this-happen(s) tension-and-torsion, remain along the line of directed 'action' - therefore, acceleration is parallel the guidance of the 'wave'-but it is 'local' not-'global'.

When this happen(s), the *2nd moment* and *1st moment engage*, of which acceleration insures that the relationship of charge and electricity remain of a 'rotation' of which is precisely out of phase with gravity. Therefore, this neutralizes, but *quantum, for what-is, remain(s) [interestingly enough] *of* focused and de-constructively interfering electromagnetism..
..... therefore gravity! propel(s) the attraction, - *to which*, charges-attract.

Simply put, I see this in my device*. That *it*, convey(s) wave(s) which are between* packet(s) and purely sinusoidal (wrapped around a column) waves.
